

# SAINNOTIF – The Notification App

## At a Glance: -

### Connect live from SAP on-premise and Google Cloud Firebase

Expand, simplify and unify data connectivity and consumption for SAP Workflows and push Notification functionality (Leave workflows and other workflows can be extended as a part of solutions) across the SAP solution landscape with virtualized data connectivity to an extensive list of data sources.

## Benefits & Features: -

- Mobiles are considered as an integral part of business now a days. For the same reason, Companies are looking for newer opportunities by implementing innovative solutions for better results.
- A push notification (in the form of Splash Message) is a brief message or alert that is "pushed" through an application to recipients who have downloaded the SAINNOTIF custom Fiori application.
- Push notifications is a way to speak directly to a user. They don't get caught in spam filters, or forgotten in an inbox. They can also remind users to use an app, whether the app is open or not.
- This feature will always prompt the user to take an action at the earliest.

## Technical Information

Solution is built on a Custom Fiori Client for Android devices which can receive **FCM (Firebase Cloud Messaging)** Push Notifications on a device on which a Manager is logged in to the built custom client as and when an employee initiates a leave request from either a desktop or a mobile using the extended Manage Leave Requests Fiori application.
